Alignment Healthcare (ALHC)

The market charged about $1 for the lost star and stopped there. The starting point was already above comparable value, and the reserves are thinner after the claims backlog cleared.

Thesis in three lines

1. Against the peer median, Alignment has lost about $1.04 a share since CMS cut H3815 to 3.5 stars, close to my $0.98 estimate of what the star is worth. The star is priced. The September fall, 28.7 points against peers (about $3.71), followed management's comments on a claims system change and late 2025 hospital bills.

2. Counted the way peers count it, after stock pay, 2027 EBITDA is $129m. At the 21 Oct close the peer multiple (10.69x) gives $8.15 before the star and $7.17 after it, against a price of $8.44. On 8 Oct the same arithmetic gave $7.56 against $8.71: the star came out of a premium the comparable numbers never supported.

3. Q2 2026 brought the first unfavorable prior-year development (ex-PAD) in ten quarters, $6.5m, and the unpaid-claims reserve fell from 28.7 to 21.3 days of medical costs. My estimates sit on consensus; the call is method and reserve quality.

Pre-set rules for the 29 October print

Back to Hold if the Q3 adjusted MBR is 87.5% or lower with favorable prior-year development and the FY guide intact; toward Buy at 87.0% or lower with guidance raised. Add to the Sell if the MBR is 88.5% or higher, prior-year development is unfavorable for a second quarter, or the FY adjusted EBITDA guide is cut below $145m. My Q3 estimates are in the public repository before the print.

Catalysts and dates

Date	Event	What to watch
27 Oct	Centene Q3	MA trend; Part D redesign year two
29 Oct	Alignment Q3	Adj. MBR vs 88.7% (mine); prior-year development; unpaid-claims days; FY guide
6 Nov	Humana Q3	MA trend; 2027 margin outlook
7 Dec	Enrollment period ends	Read-through to January membership
Early 2027	CMS monthly enrollment, January 2027	First hard read on 2027 growth by contract (H3815, H6697)
Feb 2027	Alignment FY2026 results and 2027 guidance	Guided MBR vs my 87.8%
Pending	2027-ratings lawsuit (D.D.C., filed 9 Oct)	Win worth about $0.47 a share
Oct 2027	CMS 2028 Star Ratings	Whether H3815 gets back to 4 stars

Risks to the rating

Upside: a Q3 MBR near Alignment's seasonal pattern (about 86.9%), the market keeping its convention of valuing earnings before stock pay ($10.97), margins after stock pay reaching 3% (DCF $13.33), or a lawsuit win (+$0.47). Downside: each point of 2027 MBR is $3.22 a share; regulated cash treated as trapped gives $4.54; a second unfavorable reserve quarter; RADV extrapolation, which is undisclosed.

Rating	SELL
Prior drafts (unpublished)	Hold, PT $7.20 (v13)
Price (21 Oct close)	$8.44
12-month price target	$7.17 (-15%)

What the market has already charged

Window (closes)	Alignment	Peer median	Abnormal	$ a share
14 to 16 Sep: Baird, claims system and cost comments	-32.7%	-4.0%	-28.7%	-$3.71
16 Sep to 8 Oct	+0.0%	-2.2%	+2.2%	+$0.19
8 to 9 Oct: 2027 Star Ratings	-13.4%	+1.3%	-14.6%	-$1.28
8 to 21 Oct: stars release to date	-3.1%	+8.8%	-11.9%	-$1.04
14 Sep to 21 Oct: whole period	-34.8%	+2.3%	-37.1%	-$4.80

Peers: UnitedHealth, Humana, Elevance, CVS, Centene, Molina, Cigna. Abnormal = Alignment less the peer median return. Yahoo Finance daily closes, cross-checked with StockAnalysis and Google Finance (scripts/event_study.py).

The star is priced against peers: about $1.04 a share, close to my bottom-up $0.98. What the price has not done is move to comparable value. At the 8 Oct close, the peer multiple on EBITDA after stock pay gave $7.56 before any stars cost against an $8.71 price, a $1.15 premium. At the 21 Oct close it gives $8.15 against $8.44, and $7.17 after the star.

What's in the price

	Price / consensus	Mine	Gap
Share price (21 Oct close)	$8.44	PT $7.17 (Sell)	-15%
2026 revenue	$5,218m	$5,210m	-0.2%
2027 revenue	$6,506m	$6,475m	-0.5%
2027 adj. EBITDA	$205.9m (S&P)	$205.6m	-0.2%
2027 adj. EPS (company definition)	$0.65 Yahoo / $0.74 S&P	$0.70	inside the range
2027 MBR at which my primary method equals the price	87.43%	87.83%	0.40 pts
Long-run margin after stock pay the DCF needs at $8.44	2.06% (8.9% WACC)	3.0% assumed	+0.9 pts
Street 12-month target	$13.31 mean of 13; $10.75 mean of 4 reset since 9 Oct	$7.17	

Why Sell now rather than after the print

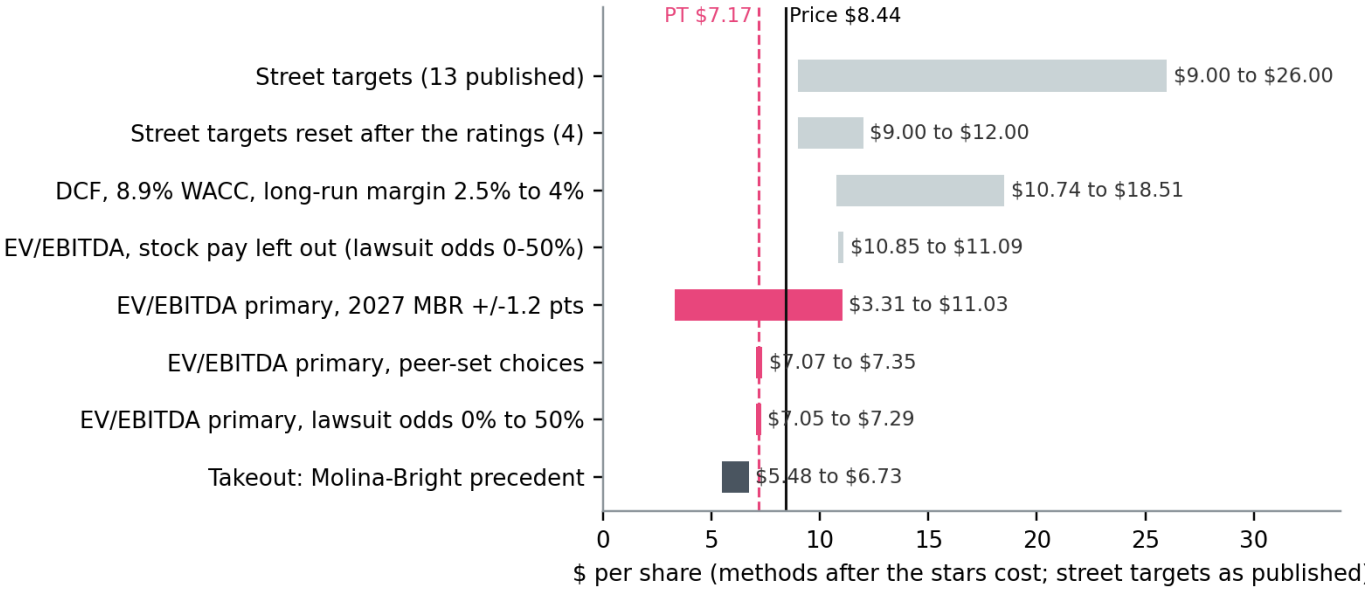

The target is 15% below the price, and the 25/50/25 cost-ratio scenarios average the same $7.17, so the valuation says Sell. The case for waiting is real: Alignment's second-half cost ratio came in 1.05, 1.84 and 0.07 points below the first half in 2023 to 2025, UnitedHealth and Elevance both reported better medical cost ratios, and if Q3 follows 2025's shape it prints about 86.9% adjusted against my 88.7%. Against that, the reserve now sits at the low end of its 2024 range after the backlog cleared, and one day of medical costs ($12.7m) is about half the Q3 EBITDA guide. I state the rules that would take me back to Hold rather than wait.

Valuation

Primary method: peer-median forward EV/EBITDA on 2027, with EBITDA after stock pay and cash netted the way the peers' enterprise values net it. Managed care is usually valued on P/E. I do not use it this year: at under 1% net margin after stock pay, one point of cost ratio moves 2027 EPS by more than 100%, so the multiple says little.

Step	Value
Peer-median 2027 EV/EBITDA (S&P Global consensus EBITDA; consolidated net debt end-2025; 21 Oct closes)	10.69x
Alignment 2027 adj. EBITDA, my model (consensus $205.9m)	$205.6m
Less stock pay (peers' EBITDA is after it)	-$76.3m
EBITDA after stock pay	$129.3m
Enterprise value at the peer multiple	$1,382m
Plus net cash: $701.7m cash and short-term investments less $330m convertible notes (30 Jun 2026)	+$372m
Equity value / 215.0m diluted shares	$8.15
Less stars cost (8.90% WACC; 25% lawsuit odds; 2028-2030 rebates, tenure-weighted members)	-$0.98
12-month price target	$7.17

Cross-checks

Check	Value	Note
DCF, WACC 8.90%, long-run margin 3.0%	$13.33	Price implies 2.06%; 7.38% WACC $18.84, 9.75% $11.35
Same multiple, stock pay left out	$10.97	Alignment's and consensus's convention
Stars cost at 0% / 50% / 100% lawsuit odds	$7.05 / $7.29 / $7.52	50% = base rate of decided cases (5 of 10)
Molina-Bright precedent (Jan 2024): $4,587/member, 0.32x revenue	$5.48 to $6.73	Distressed seller; $110m contingent on Part D stars
Peer set without CVS and Cigna / without Humana and Molina	$7.35 / $7.07	10.99x / 10.51x
Cash: parent plus dividend capacity / parent only	$4.88 / $4.54	Inconsistent with how peers are measured

The DCF counts only cash free of claims and capital rules (parent cash plus the $72.9m the subsidiaries can pay without approval), because claims cash arrives with premiums and leaves with claims and sits in working capital. The multiple method nets all cash because the peers' enterprise values do. Peer net debt is at end-2025 while Alignment's cash is at June 2026; EV/EBITDA uses S&P; Global consensus via MarketScreener, with page dates from 15 September to 16 October; prices are 21 October closes and consensus was rechecked on 22 October (unchanged).

Discount rate and scenarios

Input	Value	Source
Risk-free rate	5.15%	10-year Treasury, FRED DGS10, 19 Oct 2026 (latest)
Equity risk premium	4.20%	Damodaran implied ERP, 1 Oct 2026
Beta: Alignment / peer median	1.14 / 0.71	Yahoo 5-year monthly; my 2-year weekly gives 0.49
Cost of debt	4.25% pre-tax	Coupon on the convertible notes due 2029 (conversion about $16.04). At an 8% straight-debt cost: WACC 9.34%, stars cost $0.95, PT $7.20
Equity weight	84%	Market cap at 215.0m shares vs $330m notes
WACC: peer beta / Alignment beta / plus 1% size premium	7.38% / 8.90% / 9.75%	Base 8.90%

2027 MBR case	MBR	Target
Bear (symmetric, +1.2 pts)	89.03%	$3.31
Base	87.83%	$7.17
Bull (symmetric, -1.2 pts)	86.63%	$11.03
25/50/25 weighted, symmetric		$7.17
Bridge's own cases (+1.53 / -0.84 pts), weighted		$6.62
One point of 2027 MBR		$3.22 a share

The bridge's own cases are asymmetric because its bear case lets cost trend run 0.6 points hot with nothing matching on the bull side. With symmetric cases the weighted value equals the base, so the weighting no longer tilts the answer.

2028 adjusted EBITDA is after my $38.6m expected stars hit; consensus may not include it.

Valuation history

EV = price x shares + debt - cash - short-term investments at each date; next-year revenue is the following year's actual (2024, 2025) or my estimate (2026, 2027). On next-year adjusted EBITDA before stock pay: 18.3x at end-2024, 25.9x at end-2025, 6.7x on 21 October. After stock pay, on 215.0m diluted shares, 11.2x against a 10.69x peer median. Forward consensus history is not available free, so these are realized or estimated next-year figures, not historical consensus.

Stock pay and dilution

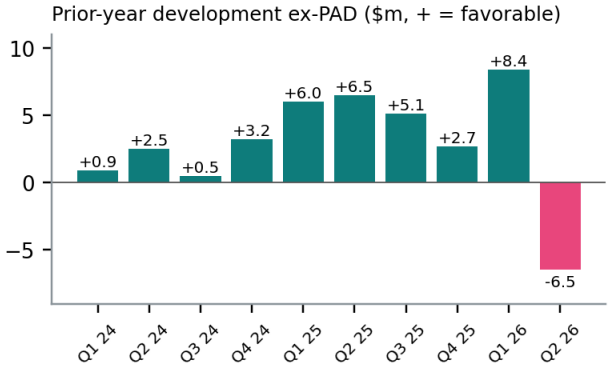

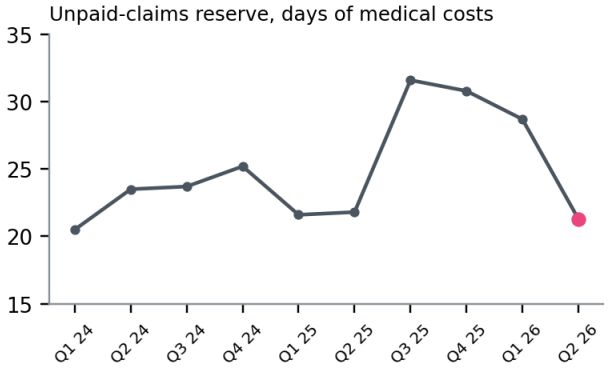

Stock pay was $62.1m in 2025, 1.57% of revenue, against 0.10% to 0.22% at the peers (Humana not available in XBRL). Weighted basic shares went from 190.9m in Q2 2024 to 207.4m in Q2 2026, up 8.7%, with 215.0m diluted. I expense stock pay and hold shares at 215.0m so it is counted once.

Positioning

Measure	Value	Source
Short interest (30 Sep 2026)	23.6m shares, 11.7% of float (prior 22.8m)	Yahoo; finviz 11.9%

2026-06-30	1,154.7	612.8	48.3	269.8	21.3	-6.5

Medical expenses payable and claims incurred but not paid: SEC XBRL (us-gaap LiabilityForClaimsAndClaimsAdjustmentExpense and the IBNR claims amount), tied to the 10-Q reserve table. Prior-year development excluding the provision for adverse deviation from each 10-Q and 10-K reserve note; Q4 = annual less nine months. Days = balance / (quarterly medical expenses / days in quarter). scripts/reserves.py.

The claims-system backlog is visible: days payable ran 43 to 47 through 2024, reached 56 in September 2025 and 54 in March 2026; unpaid-claims days went from 20 to 25 in 2024 to 32. It cleared in Q2 2026: prior-year claims paid in the first half were $245.4m against a $297.4m opening estimate (83%, against 76% in 2025), unpaid-claims days fell to 21.3, and development turned $6.5m unfavorable after nine favorable quarters ($7.1m in 2024, $20.2m in 2025). At Baird on 15 September, management tied over $6m of reserve losses to the conversion (Stocktwits report). A second unfavorable quarter is a Sell trigger.

What Alignment is selling for 2027 (CMS plan benefits, LA and Orange County)

Parent	Plans	With Part B giveback	Avg giveback $/yr	Median OTC + flex $/yr	Median in-network MOOP
Alignment	22	32%	560	675	$2,499
Blue Shield	11	0%	0	0	$1,300
CVS (Aetna)	8	25%	120	30	$1,300
Elevance	12	17%	124	134	$1,000
Humana	10	40%	348	0	$4,350
Kaiser	4	0%	0	200	$1,950
SCAN	19	21%	237	360	$999
UnitedHealth	10	60%	144	100	$800

CMS PBP Benefits 2027 (posted 1 Oct 2026): individual MA plans with drug coverage, no SNP or employer plans; each plan counted once per county; no enrollment weights. Allowances are plan maximums, annualised. MOOP medians tie to the CMS 2027 landscape file. scripts/pbp_extract.py, benefits_2027.py.

Most cash-like extras of the eight, second-highest out-of-pocket cap: a pointer to a strong January, and new members cost more in their first two years.

The 2027 cost ratio, and how far to trust it

Step	Bear	Base	Bull
2026E MBR (model)	87.88%	87.88%	87.88%
Member maturity (half credit in base)	0.00	-0.50	-1.00
Rate (4.98%) vs effective growth rate (5.33%)	+0.80	+0.29	+0.29
2027 benefit design	0.00	-0.20	-0.20
Second-half 2026 pressure carried	+0.66	+0.33	0.00
2027E MBR	89.34%	87.81%	86.98%

Backtest of the same method	Maturity	Rate vs trend	Carry	Predicted	Actual
2025 (vs 2024)	+0.06	-1.22	-0.45	-1.61	-1.40
2026 (vs 2025, guidance-based)	-0.45	+3.48	-0.02	+3.01	+0.38

The bridge got 2025 within 0.2 points and missed 2026 by 2.6, because CMS's 9.04% effective growth rate for 2026 was a catch-up in benchmarks, not a jump in Alignment's costs. For 2027 the rate-versus-trend term is small (+0.29), so most of the risk sits in maturity and the carry, but the backtest says to treat 87.8% as roughly plus or minus a point. Inputs: CMS rate announcements for 2025 (3.70%, growth rate 2.33%), 2026 (5.06%, 9.04%) and 2027 (4.98%, 5.33%); year-end members 119.2k, 189.1k, 236.3k and 299.5k guided.

2026 guidance arithmetic

Q3 adj. EBITDA	Q4 needed for the $145m low end	FY if Q4 = 0.35x Q3 (2025 shape)
$15m	$24.0m	$126.3m
$20m (mine)	$19.0m	$133.0m
$25m	$14.0m	$139.8m
$30m	$9.0m	$146.5m
$35m	$4.0m	$153.3m

First-half adjusted EBITDA was $106.0m, so the second half needs $39m to $57m for the $145m to $163m range. In 2025 Q4 adjusted EBITDA ($11.4m) was 0.35 times Q3 ($32.4m). If that shape repeats, the low end needs a Q3 of about $28.9m.

Peer read-through: what each print tests

Peer, date	Bridge term it tests	Reads against my bridge if	Reads for it if
UnitedHealth, 13 Oct (reported)	Trend and the carry	MCR 88.4% vs 89.9% a year ago and $610m favorable development: it already reads against me	
Elevance, 21 Oct (reported)	Trend: inpatient and nursing homes	Benefit expense ratio 90.6%, 70 bp better, credited to better Medicare Advantage and ACA performance: reads against my carry term	
Centene, 27 Oct	Part D redesign, year two	Part D costs in line with bids	Part D costs above bids, a flatter slope
Humana, 6 Nov	2027 margin outlook (after Alignment)	Guides 2027 MA margin expansion	Flags 2027 trend above the rate notice

Capital

At end-2025 the regulated subsidiaries held $268.5m of regulatory capital against a $116.1m combined minimum (2.3x; 2.1x a year earlier) and could pay the parent $72.9m without approval (FY2025 10-K). Scaled with revenue, the minimum is about $190m in 2027; with my earnings retained, cover holds near 2x. Per-plan statements with California's regulator were not retrievable; a public records request has been drafted.

Contract-level model

Contract	State	Members Oct 2026	Share	2027 stars	Bonus in 2028	2027E revenue
H3815 (HMO)	CA	225,609	74.9%	3.5	No: -$133.6m rebate dollars	$4,856m

H9686 (HMO)	NV	6,818	2.3%	4.0	Yes	$153m
H8832 (PPO)	CA	4,945	1.6%	4.0	Yes	$108m
H7074 (PPO)	NC	867	0.3%	too few	No	$17m
H6697 (new 2027)	CA	0		new	No (parent avg 3.71)	
Total		301,157	100%		25% of members	$6,475m

CMS Monthly Enrollment by Contract (October 2026), 2027 Star Ratings and 2027 rate book; revenue allocated by members x county benchmark (scripts/contract_model.py, model/ALHC_contract_model.xlsx). Contracts outside California grew 83% from February 2025 to February 2026; H3815 grew 21%.

Risks to the price target

Risk	Direction	Size
Q3 adj. MBR near the seasonal pattern (about 86.9%) removes the carry in the bridge	Up	+$1.07 (0.33 pts)
Market keeps valuing earnings before stock pay	Up	PT $10.97
Margins after stock pay reach 3% for good (DCF)	Up	$13.33
2027-ratings lawsuit win restores H3815's bonus (I use 25% odds; base rate 50%)	Up	+$0.47 if won
Q2 reserve charge proves a one-off from the backlog	Up	removes a Sell trigger
Strategic bid above the Bright precedent	Up	not modeled
Each point of 2027 MBR above 87.8%	Down	-$3.22
Regulated cash treated as trapped	Down	$4.54
Second unfavorable reserve quarter; each day of unpaid claims is $12.7m	Down	adds to the Sell
Full-year guide cut below $145m (Q3 under about $29m on 2025's shape)	Down	triggers Sell
RADV extrapolation upheld on appeal (PY2019 audit of H3815 under way)	Down	undisclosed
Whistleblower suit (Kardes, filed July; motion to dismiss denied 5 Oct): alleges $8m-$10m of 2024 opex capitalised. Audit Committee review found the concerns unfounded	Down	unquantified

Disclosures and certification
